

## Pentapharm® kpSilver™ films

Klöckner Pentaplast introduces Pentapharm® kpSilver™ films designed as a high speed thermoforming option with an aluminum look comparable to cold-form foil packaging. The metallic look of kpSilver™ provides the visual characteristics of cold-form foil while providing outstanding quality with significant productivity gains. There is no need for larger blister formats, expensive tooling and reduced package line speeds of cold-form foil.

kpSilver™ is available as laminate films or can be integrated into barrier structures. kpSilver™ ACLAR® laminated films offer unsurpassed protection against moisture in formulations designed to improve performance and reduce costs.

### Benefits

- › Mimics visual characteristics of cold-form foil for perceived high quality package and ensure shelf-life
- › Offers all benefits of conventional thermoforming materials (total costs, improved line set-up, productivity and efficiency)
- › Runs on standard thermoforming equipment and tooling; no need for high cost of cold-form station and expensive tools
- › Smaller blister formats, ease of portability and reduced footprint
- › Full range of barrier protection
- › Use standard lid stocks sealable to PVC
- › Provides protection from UV and visible light
- › Higher feed performance, low PVC coefficient of friction, doesn't require dedicated and expensive feeders
- › Allow to store in bulk, without damage the packaging
- › Water-base adhesive lamination (no solvent) allows for food and medical safety and is environment friendly

### Applications

- › Ethicals
- › OTC
- › Generics
- › Veterinary medicine
- › Nutraceuticals

### Multiple Polymers Available

- › Laminate films
- › alfoil® PVdC coated films
- › ACLAR® laminated films

### Description

Structure:

- › PVC / Polyolefin / ACLAR®
